Session 4

1. Create a table called Playlist with columns: id, song_name, artist, genre, and play_count. Insert at least 5 sample records representing your favorite songs from Spotify.

➔

```
USE playlist;

CREATE TABLE Playlist (
    id INT PRIMARY KEY AUTO_INCREMENT,
    song_name VARCHAR(100),
    artist VARCHAR(100),
    genre VARCHAR(50),
    play_count INT
);

INSERT INTO Playlist (song_name, artist, genre, play_count)
VALUES
('Tere Liye', 'Roop Kumar Rathod', 'Bollywood', 100),
('Kesariya', 'Arijit Singh', 'Bollywood', 120),
('Blue Eyes', 'Yo Yo Honey Singh', 'Hip Hop', 90),
('GOAT', 'Diljit Dosanjh', 'Punjabi', 85),
('Millionaire', 'Yo Yo Honey Singh', 'Hip Hop', 95);
```

Output | Result #4

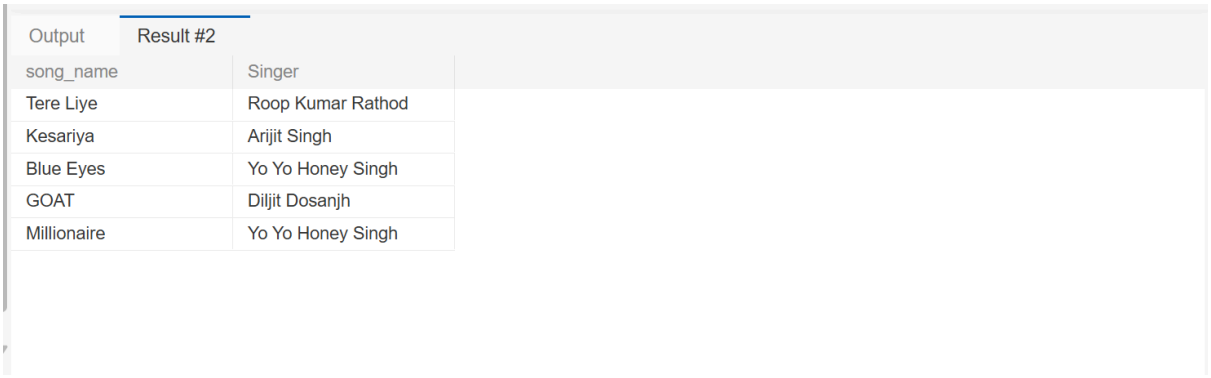

| id | song_name | artist | genre | play_count |
|---|---|---|---|---|
| 1 | Tere Liye | Roop Kumar Rathod | Bollywood | 100 |
| 2 | Kesariya | Arijit Singh | Bollywood | 120 |
| 3 | Blue Eyes | Yo Yo Honey Singh | Hip Hop | 90 |
| 4 | GOAT | Diljit Dosanjh | Punjabi | 85 |
| 5 | Millionaire | Yo Yo Honey Singh | Hip Hop | 95 |

2. Write a SELECT query to display only the song_name and artist from the Playlist table, but show the artist column as 'Singer' using an alias.

➔

```
USE playlist;

SELECT song_name, artist AS Singer
FROM playlists;
```

Output | Result #2

| song_name | Singer |
|---|---|
| Tere Liye | Roop Kumar Rathod |
| Kesariya | Arijit Singh |
| Blue Eyes | Yo Yo Honey Singh |
| GOAT | Diljit Dosanjh |
| Millionaire | Yo Yo Honey Singh |

3. Write a SELECT query to find all songs in the Playlist table where the genre is 'Pop' and play_count is greater than 100. Sort the results by play_count in descending order.

➔

```
USE playlist;

SELECT * FROM playlists
WHERE genre = 'Bollywood' AND play_count > 100
ORDER BY play_count DESC;
```

Output | Result #2

| id | song_name | artist | genre | play_count |
|---|---|---|---|---|
| 2 | Kesariya | Arijit Singh | Bollywood | 120 |

4. Use the COUNT aggregate function to find out how many songs in your Playlist table belong to the genre 'Hip-Hop'.

➔

```
USE playlist;

SELECT COUNT(*) AS total_songs
FROM playlists
WHERE genre = 'Hip Hop';
```

5. Write a SELECT query that shows the total number of plays (SUM of play_count) for each genre in your Playlist table, grouped by genre. Hint: Use GROUP BY with the SUM function to aggregate play counts by genre.

➔

```
USE playlist;

SELECT genre, SUM(play_count) AS total_plays
FROM playlists
GROUP BY genre;
```

Output | Result #2

| genre | total_plays |
|---|---|
| Bollywood | 220 |
| Hip Hop | 185 |
| Punjabi | 85 |
